

IUCN - FULL MIND MAP

Topic-wise | Hinglish | SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. IUCN & CITES - Core Facts
2. Red Data Book / Red List
3. Endangered Species & Birds
4. Extinction Criterion
5. Psychrophiles
6. Wildlife - Natural Habitat Matching

1. IUCN & CITES - Core Facts

- 1948 mein nirmat international union ke liye conservation ke nature (IUCN) ek sadasyata union hai, jo sarvajanik, niji aur non-sarakari sangathanon ko jnyan aur upakaran provide karta hai taaki human pragati, economic development aur nature ka conservation ek saath ho saken. yeh United Nations ka hissa nahi hai. IUCN ki visheshajnyata aur widespread netavark world bhar mein conservation pariyojanaon ke bade aur alag-alag portapholiyo ke liye majabut basis provide karte hain. isliye statement (1) galat hai jabki statement (2) aur (3) sahi hain. 2. nature aur natural resources ke conservation ke liye international union (IUCN) dwara prakashit 'red data pustaken' mein nimnalikhit ki suchiyan hoti hain: 1. biodiversity hotspot mein present sthanik plants aur animal prajatiyan. [Q1]

2. Red Data Book / Red List

- IUCN ki red list aur uske historic "red data pustak" context ka mukhya vishay species ke extinction-jokhim ka akalan hai, jismein sankatapan, endangered aur serious roop se endangered jaisi endangered shreniyan shamil hain. yeh sirf biodiversity hotaspoton ki sthanik species ki list nahi hai. [Q2]
- I.U.C.N. - nature aur natural resources ke conservation ke liye international union (IUCN) dwara prakashit 'red data pustaken' mein endangered plants aur animal species ki suchiyan hoti hain. [Q3]
- Endangered plants and animals - 1964 mein established international union ke liye conservation ke nature ki endangered species ki lal list developed hokar animal, kavak aur plants species ki global extinction-jokhim condition par world ka sabse widespread suchana source ban gayi hai. [Q4]
- IUCN ki lal list ko life ka bairomitar (Barometer of Life) kaha jata hai. jis type ek bairomitar atmospheric dab mapakar negative weather ki paristhitiyon ke liye taiyari karne mein hamari help karta hai, [Q5]
- IUCN ki lal list ko life ka bairomitar (Barometer of Life) kaha jata hai. jis type ek bairomitar atmospheric dab mapakar negative weather ki paristhitiyon ke liye taiyari karne mein hamari help karta hai, [Q6]
- Red Data Book - endangered species red data pustak mein listed ki jati hain. [Q7]
- Organisms & animals facing the danger of extinction - endangered species red data pustak mein listed ki jati hain. [Q8]
- endangered species red data pustak mein listed ki jati hain. [Q9]

3. Endangered Species & Birds

- Great Indian Bustard, Musk Deer, Red Panda and Asiatic Wild Ass - 2012 ke is I.A.S. sawal ke samay, gret indiyani bastard, kasturi mrig, lal panda aur Asian wild gadha - sabhi IUCN red list mein endangered (Endangered, EN) category mein vargikrit the. not: samay ke saath population aur conservation prayason mein badlav ke reason IUCN classification badal sakta hai, isliye inmein se kuchh species ki abhi condition 2012 se bhinn ho sakti hai. [Q10]
- Great Indian Bustard - gret indiyani bastard ek serious roop se endangered species hai. [Q11]

4. Extinction Criterion

- Galat kathan: 50 years; antarrashtriya nature conservation union (IUCN) dwara used paribhasha ke ke mutabik, agar kisi species ko uske natural habitat mein pichhale 50 varshon se nahi dekha gaya hai, to use extinct mana jata hai. [Q12]

5. Psychrophiles

- Psychrophiles - saikrophails 0-15°C temperature limit mein sabse achchhi increase karte hain. lek vhilans jaisi arkatik jhilon se obtained organisms ko charam saikrophails (shit-premi) mana jata hai. saikrophails aam taur par 20°C se zyada temperature par living nahi rahate. [Q13]

6. Wildlife - Natural Habitat Matching

- blu-phind mahasir natural roop se kaveri river mein payi jati hai. iravadi dolphin marine taton ke paas jvaranadamukhon aur Bengal ki Gulf aur south-purv Asia ke kuchh bhagon ki nadiyon mein payi jati hai. chilika lake mein bhi iravadi dolphin payi jati hai. chanbal river mein Ganga dolphin payi jati hai. rasti-spotted kait eastern Ghat mein payi jati hai. isliye option (c) sahi jawab hai. [Q14]
- indri (Indri indri), jise babakoto bhi kaha jata hai, sabse bade living limaron mein se ek hai. sabhi limaron ki tarah indri medagaskar dvipiy country ki sthanik species hai. indri is dvip ke jawab-eastern tat ke saath ugane wale hare-bhare tropical varshavanon mein apna ghar banate hain. yeh din mein sakriy rahane wala vrikshavasi organism hai, jisaki IUCN conservation condition serious roop se endangered hai. isliye pair 1 galat hai. elk (Cervus canadensis), ya vaipiti, hiran total (Cervidae) ki dusari sabse badi species hai aur jawab amerika aur madhy aur eastern Asia ki apni basic limit mein sabse bade sthaliy stanadhariyon mein se ek hai. yeh indoneshiya mein natural roop se nahi paya jata. isliye pair 2 galat hai. [Q15]
